

Twenty-three TNA projects selected for access to the TCS Multi-scale laboratories facilities

**MULTI-SCALE
LABORATORIES**

Date:

Monday, February 12, 2018 - 13:15

The Thematic Core Service ([TCS](#)) Multi-scale laboratories (MSL) 2nd [TNA](#) pilot Call was a great success with 28 applications submitted for access to 13 solid Earth laboratory facilities across Europe.

The scientific proposals have been evaluated by four disciplinary [TNA](#) committees composed of laboratory experts, external and internal to the [TCS](#) MSL. The selection process was very competitive and the members of the [TNA](#) committees had the hard task to evaluate high quality and worthwhile proposals.

Twenty-three excellent [TNA](#) projects were selected and will benefit of direct physical access, remote services and virtual access to advanced European solid Earth Science laboratories.

The [TNA](#) projects will run from February to December 2018.

Access to the [TCS](#) MSL facilities during the 2nd [TNA](#) pilot call is supported by dedicated national funding and/or in-kind contributions from the participating [TCS](#) partners.

We wish the selected [TNA](#) users and user groups a successful collaboration with their host laboratory facilities.

[TNA](#) to EPOS Multi-scale laboratories creates new opportunities for synergy, collaboration and innovation.

More information at the [EPOS The Thematic Core Service \(TCS\) Multi-scale laboratories \(MSL\) webpages](#).
